LEGO Mindstorms NXT 2.0

The experts at LEGO have done it again with the LEGO Mindstorms NXT 2.0. This brings the technology of a microcomputer, and adds it to the excitement that children receive from working with the most recognizable name in building toys.

The 32-bit microprocessor has brick and intuitive programming software. What does that mean? It means taking the thrill of creating unique designs and carrying it to the next level. This capability allows children to not only construct robots, but robots that can feel, move, see, and even speak.

The great thing about this concept of building robots is that it is challenging, without making it too difficult for children. By introducing robots, it is designed to test their skills, and help them to develop problem-solving capabilities beyond their usual limits.

But this is no simple box of robot parts: the latest in robotic technology has been included. Everything from smart sensors, interactive challenges, an advanced programmable microcontroller, Interactive Servo motors, and even wireless Blue tooth and USB connections are included.

The microprocessor has a large matrix display, speaker, and both input and output ports. The built-in rotation sensors of the Servo motors, allow the robots to be moved in small one-degree steps at a time. Touch sensors give the robots the sense of feel, and allows them to perform simple commands, just like their human creators. And the four robotic sensors help them to see and navigate.

Another ingenious tool is the Color sensor. That's right, your child's robot can actually distinguish from a wide array of colors – also, black and white – even different light settings.

Once your robot is constructed, you can use the included software to create a personalized program, and then download that program to your robot. The robot can be configured for both PC and MAC, using one of the 16 different building and programming capabilities, starting with the beginner level and advancing with your child to the expert level, as their confidence and their abilities grow.

Give your child something new and exciting this year with the LEGO Mindstorms NXT 2.0.
